

Gender Pay Gap Report as at 31 March 2019

We are an employer, required by law to carry out Gender Pay Reporting under the Equality Act 2010 (Gender Pay Gap Information) Regulations 2017.

This involves carrying out six calculations that show the difference between the average earnings of men and women in our organisation. These calculations are:

- the difference in the mean pay of full-pay men and women, expressed as a percentage;
- the difference in the median pay of full-pay men and women, expressed as a percentage;
- the difference in mean bonus pay of men and women, expressed as a percentage;
- the difference in median bonus pay of men and women, expressed as a percentage;
- the proportion of men and women who received bonus pay; and
- the proportion of full-pay men and women in each of four quartile pay bands.

We are required to publish the results on our own website and a government website. We can use these results to assess:

- the levels of gender equality in our workplace
- the balance of male and female employees at different levels
- how effectively talent is being maximised and rewarded.

The challenge in our organisation and across Great Britain is to eliminate any gender pay gap.

The figures have been reached using the mechanisms that are set out in the gender pay gap reporting legislation. For more information see: <https://www.gov.uk/guidance/gender-pay-gap-reporting-overview>

BDC Results:

- 1. The difference in the mean pay of full-pay men and women, expressed as a percentage is 18.8%**

This figure is based on:

- A standard mean male hourly rate of £17.89
- A standard mean female hourly rate of £14.52

Summary

According to the Office of National Statistics (ONS), taken from the Annual Survey of Hours and Earnings 2017, the Gender Pay Gap nationally was 18.4%. Specifically for 'Local government administrative occupations' there was a 15.9% Gender Pay Gap.

- 2. The difference in the median pay of full-pay men and women for BDC is 27.8%**

This figure is based on:

- A standard median male hourly rate of £16.96
- A standard median female hourly rate of £12.24

Summary

There are a higher proportion of females in lower grade positions at BDC (contact centre and lower grade ARP positions) which decrease the median hourly rate.

- 3. The difference in the mean bonus pay of men and women for BDC is 86.9%**

This figure is based on:

- A mean annual male bonus of £4,054.56
- A mean annual female bonus of £530.00

Summary

In the 12 month period used for data collection 13 BDC employees received a payment(s) defined as a 'bonus'. 5 of these individuals received VPI (Variable Pay Initiative) payments associated with the ARP Enforcement service. All 5 of these individuals were male.

4. The difference in the median bonus pay of men and women, for BDC is 78.4 %

This figure is based on:

- A median annual male bonus of £2,777.63
- A median annual female bonus of £600.00

Summary

In the 12 month period used for data collection 13 BDC employees received a payment(s) defined as a 'bonus'. 5 of these individuals received VPI (Variable Pay Initiative) payments associated with the ARP Enforcement service. All 5 of these individuals were male.

5. The proportion of men and women at BDC who received bonus pay:

- Proportion of males employed who receive a bonus is 9.2%
- Proportion of females employed who receive a bonus is 2.5%

Summary

The VPI payments, 100% of which were made to male staff, can help account for the difference in this result.

6. The proportion of full-pay men and women in each of four quartile pay bands.

BDC pay quartiles (number of employees in each band)

Band	Males	Females	Description
A	12	60	Includes all employees whose standard hourly rate places them at or below the lower quartile
B	18	54	Includes all employees whose standard hourly rate places them above the lower quartile but at or below the median
C	22	50	Includes all employees whose standard hourly rate places them above the median but at or below the upper quartile
D	35	36	Includes all employees whose standard rate places them above the upper quartile

How does this compare per quartile?

Band A (lowest paid)	Band B	Band C	Band D (highest paid)
Male: 16.7% Female: 83.3%	Male: 25.0% Female: 75.0%	Male: 30.6% Female: 69.4%	Male: 49.3% Female: 50.7%

Summary

The higher % of females in the lowest two quartiles can be explained by the workforce demographic where contact centre posts and lower grade ARP posts are predominantly occupied by females, as well as the fact that females do make up 69.7% of the workforce. This is because we are a flexible employer and nationally more females work part time than males so these lower grade roles are suitable for females.

In our upper quartile we have our shared Managers, almost all of whom BDC employ. The shared roles are demanding in nature and require travel and evidence shows that these roles are less attractive to women and we have less women apply for these higher paid roles which accounts for the difference in the upper quartiles where these senior posts are.
